

COVID-19 RESPONSE

In partnership with **BIGMOTIVE**

Covid-19: Design Thinking

DATE: 08 JUL 2020

PRESENTED BY: Damian Cranney, Managing Partner, Big Motive

Big Motive is an experience design & strategy studio.

We collaborate with ambitious teams to design digital products and services that address their biggest challenges.

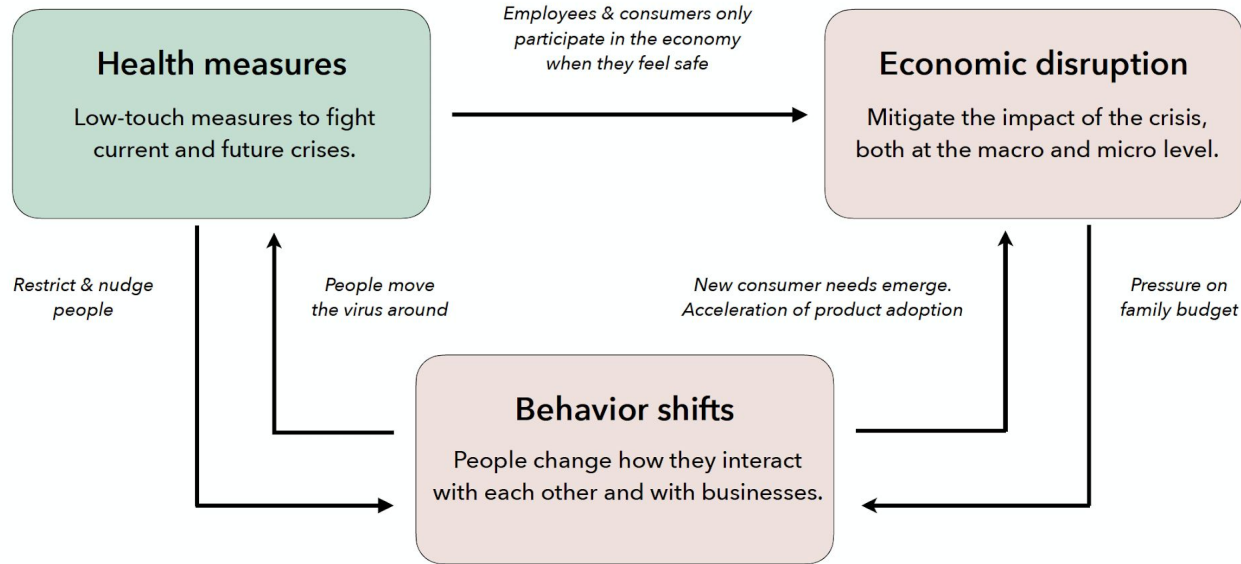

Increasingly, we also help our clients to build design capability and nurture a culture of innovation.

- Digital products
- Service design
- Strategy
- Design capability

Let's talk about design

- What's happening in the world of design?
- How are design teams responding to the pandemic?
- What can we learn from this and what can we do?

A Global Pandemic and emergence of the 'Low Touch Economy'

Let's talk about design

What is Design?

Generation of new ideas

Linking creativity and innovation, design shapes ideas into practical / attractive propositions for customers. Design is creativity deployed to a specific end

Successful exploitation of new ideas and process that carries them through to new products, new services, new ways of running the business or new ways of doing business

There are three kinds of design.

01

There's a right way to make what is perfect, crafted, and complete.

Classical Design

Driver/ the Industrial Revolution, and prior to that at least a few millennia of ferment.

02

Because execution has outpaced innovation, and experience matters.

Design Thinking

Driver/ the need to innovate in relation to individual customer needs requires empathy.

03

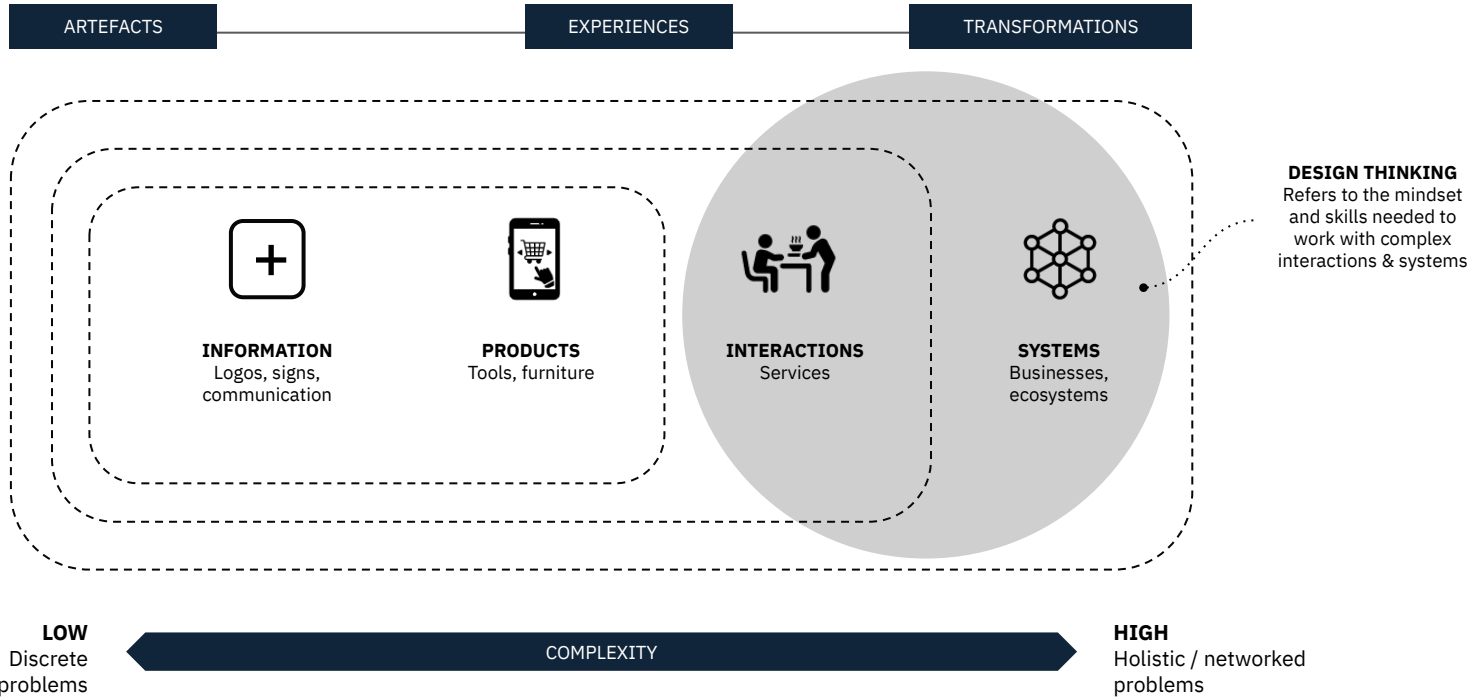

Design for billions of individual people and in real time, is at scale and TBD.

Computational Design

Driver/ the impact of Moore's Law, mobile computing, and the latest tech paradigms.

Why design?

The New Design Frontier

InVision surveyed thousands of companies to explore the relationship between design practices and business performance. The report found that those dominating their industries are the ones treating the screen like the most important place on Earth.

The largest design maturity study

2,200 companies

Thousands of companies, including large enterprises, small businesses, agencies, and even government and non-profit organizations, shared how design makes an impact.

24 industries

Every industry under the sun reported on the impact of design to their organizations. There's a view for aerospace, advertising, insurance, education, and everything in between.

77 countries

Those surveyed included businesses spanning the globe, from North America to Latin America, Europe to Asia.

Design Maturity Model

We identified five natural levels of design maturity, with Level 1 being the least mature and Level 5 employing the most mature design practices...

1. Design is what happens on screens — **PRODUCERS**
2. Design is what happens in a workshop — **CONNECTORS**
3. Design is a standardized scalable process — **ARCHITECTS**
4. Design is a hypothesis and an experiment — **SCIENTISTS**
5. Design is business strategy — **VISIONARIES**

“

Good design is good business

THOMAS J. WATSON JR.
CEO AND PRESIDENT, IBM 1956–1971

Retail analysts are citing Apple's reopening strategy as the future of retail. Like everything Apple does, the strategy has been **designed**.

Design in Crisis

COVID-19
RESPONSE

The screenshot shows a web browser window with the URL 'covid-19.hscni.net'. The page header includes the HSC logo and 'COVID-19 NI', along with links for 'Latest News' and 'Useful Links'. A main banner features the text 'COVID-19 NI is a symptom checker and provides the latest advice for people in Northern Ireland.' and a call-to-action button 'Start COVID-19 Symptom Checker'. Below this is a section titled 'Latest News & Updates' with six news cards. The first card is titled 'Coronavirus symptoms update' (4 days ago), the second 'Why are there differences in the reporting of COVID-19 related deaths?' (2 weeks ago), and the third 'Contact tracing to help limit a second wave of coronavirus' (4 weeks ago). The remaining three cards are partially visible and also dated '4 weeks ago'.

- Start with **empathy**
- **Define** the problem
- Develop a **creative** approach
- Build a **prototype**
- **Test** the hypothesis

Why design, now?

The opportunity for innovation

10 principles for design in a crisis

Design is vital in a crisis, without it we make mistakes, risk lives, and ultimately, waste valuable time that we don't have. But making the voice of design – and user needs – heard at a time when everyone around us is sacrificing speed for haste can be difficult.

This year I published Good Services containing 15 principles of good service design, and whilst the principles are hugely relevant to services undergoing a crisis (people still need to find your service and understand what to expect!) there are a new set of needs emerging when an entire nation, and the world,

Design in crisis principles

1. Do no harm

Do not take actions that actively put your staff or users in harm's way

2. Speak the truth

Be open and honest, using only verified facts from trustworthy sources

3. Be clear, and actionable

Give your users clear, actionable instructions on what to do

4. Go to where people are

Understand where your users are accessing information and how they are able to access your service

5. Prioritise the most vulnerable

Make sure that people who are most at risk, or most in need, can use your service

6. Give power back

Provide people with the tools to enable them to support themselves

7. Encourage the right behaviours from users and staff

Help your users and staff to work in a way that benefits themselves and those around them

8. Respond to change quickly

Respond to the changing crisis and your user's changing needs quickly

9. Scale responsibly

Make sure you're able to meet demand by planning affordances in the way you scale

10. Remove barriers to ask for help

Make it easy for your users to ask you for help, when, where and how they need it

Five ways to leverage design in recovery

1. Start with empathy
2. As yourself How Might We?
3. Dive in to digital tools
4. Cultivate an experimental mindset
5. Optimise your team

1. Start with empathy

- Have you spoke to your best customers lately
- How well do you understand their needs
- You personas and storyboards to empathise with customers

2. Ask yourself 'How Might We'

- What problem are you trying to solve?
- What problem could you solve
- Frame your problem by turning it into a question

What design thinking can teach us about teamwork in a world on pause

Dr. Frederik G. Pferdt / June 2020 / [Organizational Culture](#)

Think with Google

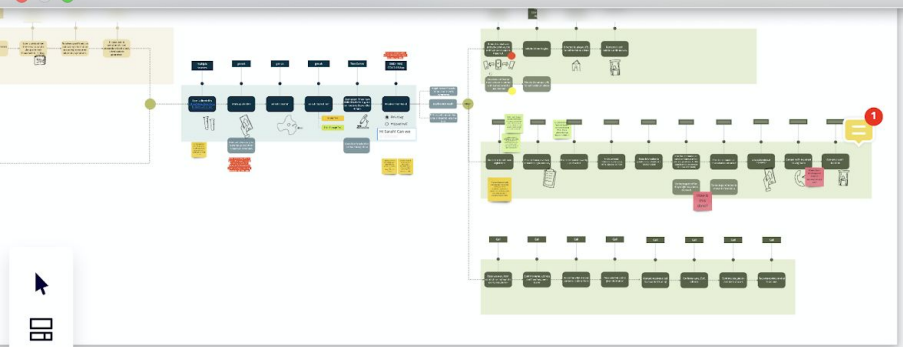

How might we create trust and psychological safety in teams when some of the assumptions of being and working together

Let's frame good questions using a design- thinking tool called the "How might we" (HMW) question. For example:

- Problem: We are required to work from home and training sessions might not establish that crucial human connection. HMW: How might we make training via video conference even more useful than those delivered in person?
- Problem: Working from home is tough for me. I struggle to stay focused and I'm distracted by family. HMW: How might we help people at home accommodate a range of working styles?

3. Dive into digital tools

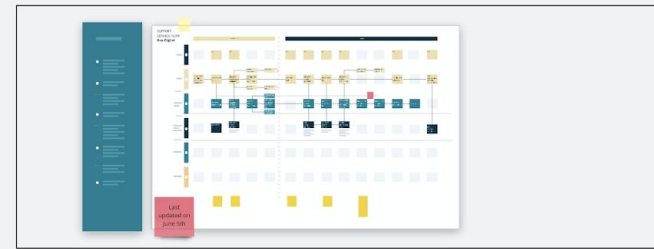

- The pandemic has lead to mass acceleration of a 20 year trend
- Virtual meetings, whiteboards and collaborative design tools will help you to build better, safer culture
- And to quickly create, launch and iterate better services

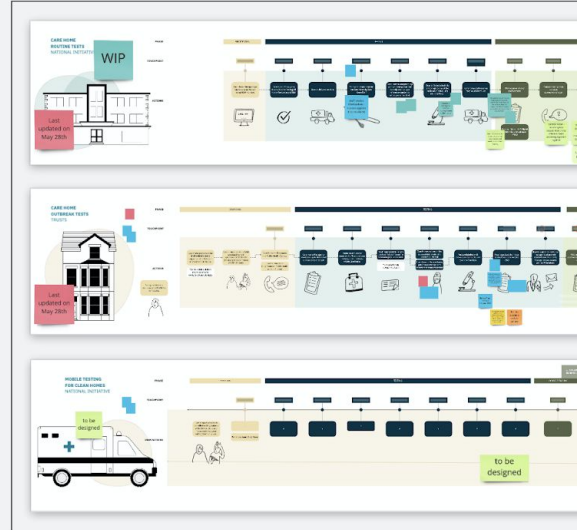

ing Blueprint

4. Non-digital Service Flow

5. Care Home Flows

6. Trust Employee Journey and Trust Led Testing Blueprint

4. Cultivate an experimental mindset

- Get started by reframing ‘innovation’ as ‘experimentation’
- Learn from failure by practicing ‘design sprints.’
- Find out what works and build toward a solution

5. Optimise your team

- How can you reorganise to support innovation
- Take the opportunity to define and prioritise roles
- Use your new tools to design new ways of working

A person is walking across a suspension bridge that spans a deep canyon. The bridge has a wooden deck and metal railings. The canyon walls are rocky and covered in green grass. In the background, there is a clear blue sky and a body of water. The overall scene is bright and scenic.

A reset of society is the perfect opportunity for change.

Design thinking will help you get started, learn quickly from experimentation and create new services that your customers need.
